Presenting

JM Large & Mid Cap Fund

(An open ended equity scheme investing in both large cap and mid cap stocks)

NFO Opens on: 4th July, 2025

NFO Closes on: 18th July, 2025

What are the benefits of investing in Large & Midcap Funds ?

Large & Midcaps have provided a smooth ride to investors in the past

Holding period Returns (%)	Nifty 100 TRI	NIFTY LargeMidcap 250 TRI	Nifty Midcap 150 TRI
Any 3 year Holding period	12.69%	14.23%	15.87%
Any 5 year Holding period	12.77%	14.28%	15.89%

Volatility of returns	Nifty 100 TRI	NIFTY LargeMidcap 250 TRI	Nifty Midcap 150 TRI
3 year Holding period	6.77%	8.95%	11.61%
5 year Holding period	4.72%	5.96%	7.46%

Historically, Large & Midcaps have provided returns similar to Midcaps at far less volatility

Source: Ace MF. Data shows averages of daily rolling returns since April 1, 2005 to May 31, 2025. The returns shown are the average returns generated by the respective indices over any 3 year and 5 year period, has the investor invested on any day in the past 20 years with an investment horizon of 3 years and 5 years respectively. **Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.**

Combination of Large & Midcaps provides about 80% of long term Midcap returns with nearly the volatility of Large caps

Year	Return of large and midcap as a % of midcap returns	Volatility of large and midcap as a % of Volatility of large caps
CY2015	49%	99%
CY2016	90%	104%
CY2017	80%	109%
CY2019	416%	100%
CY2020	86%	93%
CY2021	78%	101%
CY2022	105%	102%
CY2023	74%	100%
CY2024	77%	107%

Combination of Large & Midcaps provide volatility profile of Large caps while maintaining the return potential of Midcaps

Source: Ace MF. Data as on May 31, 2025. Nifty 100 TRI is used to represent Large caps. Nifty LargeMidcap 250 TRI for Large and Midcaps and Nifty Midcap 150 TRI for Midcaps. Periods when midcaps gave negative returns have been removed due to mathematical constraints. Long term average of midcap returns is the average of last 10 calendar year returns with outliers removed. To calculate the returns, daily returns of indices since 2015 have been calculated and annualized and to calculate the volatility, volatility of the daily returns since 2015 has been annualized.
Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.

Volatility of Large & Midcaps have been similar to that of Large caps across market conditions

Source: Ace Equity NXT, Ace MF. Data as on May 31, 2025. Nifty 100 TRI is used for representing Large caps, Nifty LargeMidcap 250 TRI for large and midcap and Nifty Midcap 150 TRI for representing Midcaps. **Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.** Normalized Volatility = 30 days rolling average (High-Low)/30 days rolling average close price of indices.

Midcaps add alpha and Large caps lower the beta of a portfolio

Alpha over Nifty 500 – 7 year holding period

Beta with Nifty 500 – 7 year holding period

On an average Midcaps have generated higher alpha over Nifty 500 and Large caps have had lower beta against Nifty 500 over the long term.

Source: Ace MF. Data as on May 31, 2025. *CYTD Calendar Year till date. Above data pertains to Calendar year returns. **Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.** The data above shows alpha generated in a seven year holding period for different years. However the pattern is the same across holding periods.

Large & Midcaps have provided a steady performance year after year

Returns (%)			
Calendar Year performance (%)	Nifty 100 TRI	Nifty LargeMidcap 250 TRI	Nifty Midcap 150 TRI
2015	-1.32	3.87	9.28
2016	4.66	5.32	5.47
2017	32.88	44.07	55.73
2018	3.39	-4.71	-12.5
2019	11.44	5.83	0.58
2020	15.97	20.6	25.12
2021	26.03	36.03	46.48
2022	4.94	4.48	3.91
2023	21.24	32.66	44.61
2024	12.87	18.3	23.76

Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.

Large & Midcaps combined provide better earnings growth

Table sorted as per Average of 3 year PAT growth for

Large cap					Midcap					Large & Midcap				
	FY21	FY22	FY23	FY24		FY21	FY22	FY23	FY24		FY21	FY22	FY23	FY24
Top 50 stocks	24%	38%	36%	49%	Top 50 stocks	38%	49%	54%	50%	Top 50 stocks	46%	64%	63%	68%
Next 50 stocks	-14%	-5%	2%	-3%	Next 50 stocks	6%	10%	14%	12%	Next 50 stocks	18%	23%	27%	31%

Blend of Large & Midcap stocks provides the best of both worlds and therefore has demonstrated better earnings growth than either category

Source: ACE Equity NXT, Data is for the latest financial year – FY2024. Data as on May 31, 2025 as per latest available data. Large, Midcap and Large and Midcap universe has been sorted in descending order of earnings growth. Average 3 year PAT growth for Top 50 and next 50 stocks for each segment has been mentioned in the table above. Large and Midcaps combine the highest growing Large and Midcap stocks, making their PAT growth better than either category. Outliers and stocks which have negative PAT as the beginning value in the percentage growth calculation have been removed from the list due to calculation constraints. **Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.**

Large & Midcaps offer a full universe of opportunities

The Large & Midcap category offers a blend of stability and growth by combining the scale and leadership of large caps with high – growth potential of midcaps. This diversified universe contributes significantly to corporate profits and market liquidity.

Source: Ace MF, AMFI. Data as on June 30, 2025 as per latest available data. **Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.** Market coverage in terms of market capitalization is calculated by dividing the sum of the market capitalizations of NSE listed large and mid cap companies by the sum of market capitalization of all listed companies on NSE.

Large & Midcaps provide better sector and stock diversification

Sectors	Weightage (%)		
	Nifty 100 TRI	Nifty Midcap 150 TRI	Nifty Large Midcap 250 TRI
Financial Services	34.59	23.83	29.20

Why Large and Midcaps now?

Potential Foreign Portfolio Investment (FPI) flow reversal could benefit Large caps and large Midcaps

Source: ACE MF. Data as on May 31, 2025 . FPI – Foreign Portfolio Investment

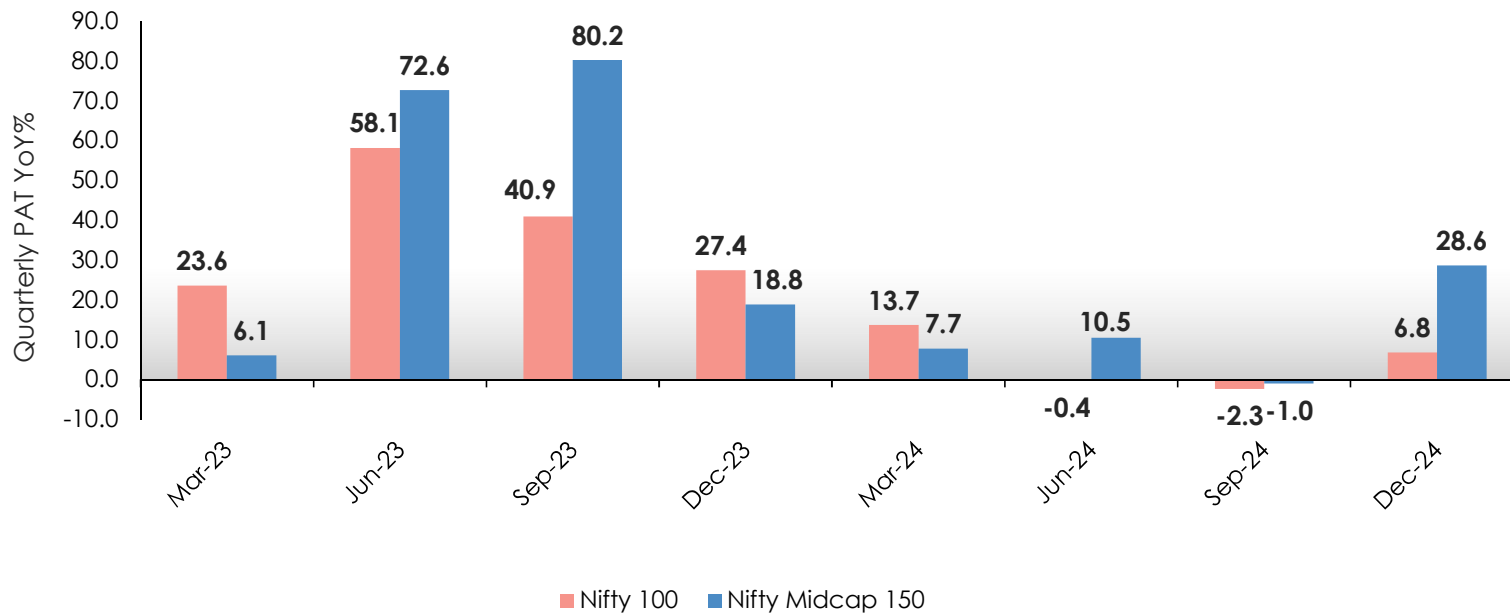

Foreign Portfolio Investment (FPI) holdings in Large caps had gone down significantly. Historically reversal of FPI flows have benefited large caps

FPIs prefer the liquidity, lower risk and regulatory comfort offered by Large caps. Usually FPIs invest through index funds which are large cap heavy.

Recovery in earnings is more pronounced in Midcaps

Midcap companies' PAT saw the strongest rebound in Q3 FY'25

Source: ACE Equity, JM MF Research, NIFTY 100: 99 common companies, Nifty Midcap 150: 146 common companies, Nifty Smallcap 250: 231 common companies | PAT – Profit After Tax | PAT excluding exceptional items taken. Data as on May 31, 2025. **Past performance may or may not be sustained in future and the same may not necessarily provide the basis for comparison with other investment.**

Sharp correction can lead to better investment opportunities

Process & Philosophy : GeeQ Model

*OCF/EBITDA (Operating cash flow/Earning before interest, taxes, depreciation and amortisation) The above process is an internal process which is subject to change or variation without any notice

Model filter – Quantitative and Qualitative Matrix

At least 70-80% of our portfolio meet the requirements with exceptions made for turnaround stories, special situations and tactical ideas.

*OCF/EBITDA (Operating cash flow/Earning before interest, taxes, depreciation and amortisation) | The above process is a internal process which is subject to change or variation without any notice

Proposed Investment Strategy – JM Large & Mid Cap Fund

Growth orientation

High growth approach with quality filters. Differentiated portfolio with focus on bottom-up stock selection

1

Focus on consistency

Focus on active risk adjusted returns to ensure consistency. Dynamic and disciplined portfolio management

2

Market cap Allocation

Based on mandated asset allocation as per SID and relative PEG ratio attractiveness

3

Liquidity & flexibility

Cornerstones of our portfolio strategy to ensure that we adapt swiftly to evolving market conditions

4

Source: JMF MF internal research; The above guidelines are subject to evolving market conditions and may change on the discretion of the fund manager with or without prior notice .
PEG ratio stands for PE adjusted for growth. PE stands for the Price to Earnings ratio.

Current market outlook

Gauged through **sectoral performance**, there is a clear shift to domestic oriented companies with Fast Moving Consumer Goods (FMCG), banking and real estate performing well over the past few months.

Financials may continue to deliver a steady performance due to **steady margins**, modest credit growth and stable asset quality.

There is an increasing optimism on rural recovery coming through the recently declared results. **Normal monsoons and stable prices**, and benign inflation could help improve consumption from rural markets. **Urban consumption** is also likely to revive on back of lower income taxes as the benefits start accruing from April 2025 onwards. We expect improved domestic consumption to also improve the manufacturing output.

There are signs that State and Central government **capital expenditure** has also resumed which may support growth outlook.

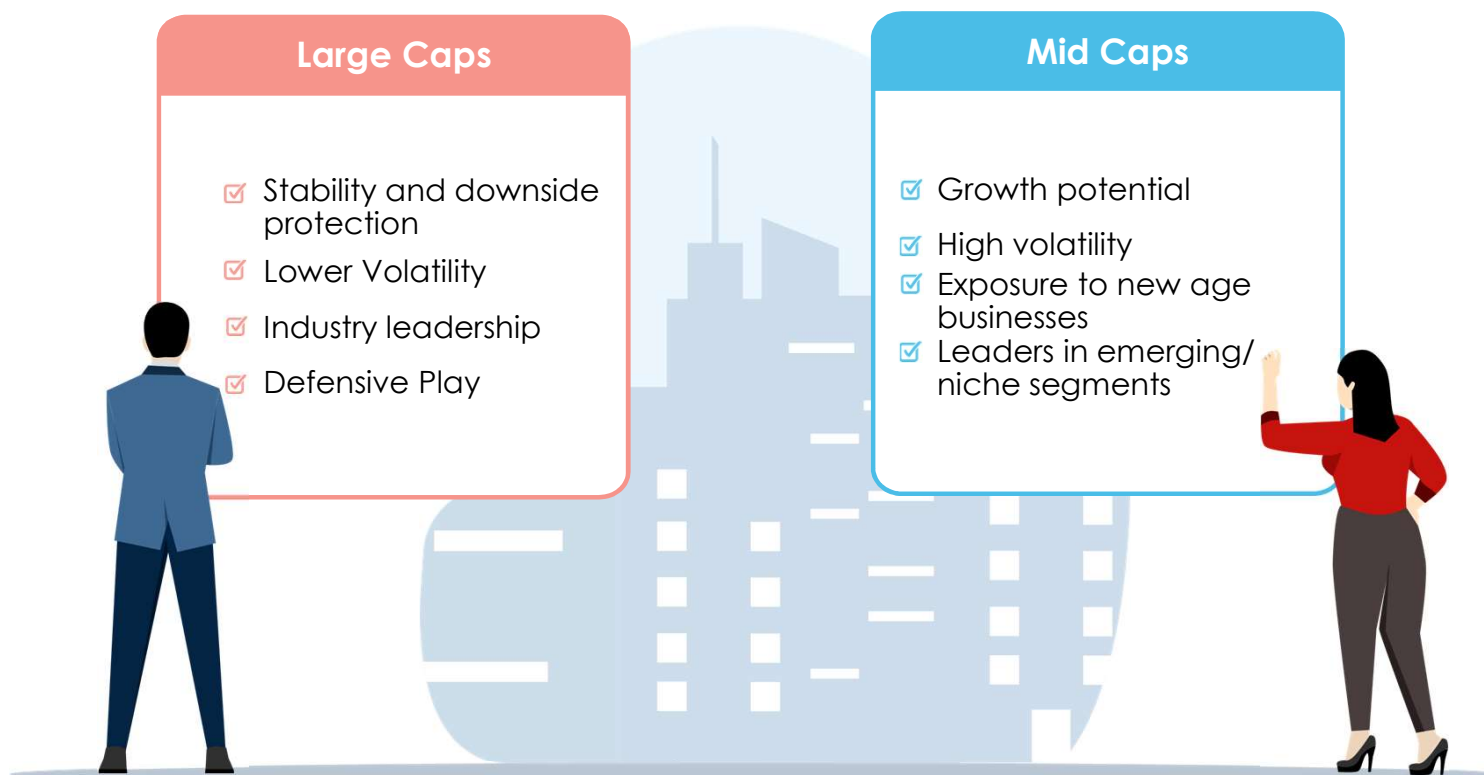

Over the past few months, we have increased **allocations to Financials, Services, Auto and Cement** amongst others and decreased exposure to Chemicals, Pharmaceuticals and IT.

What is in this scheme for investors?

Source: JMF MF internal research. Data as on June 30, 2025. Market coverage in terms of market capitalization is calculated by dividing the sum of the market capitalizations of NSE listed large and mid cap companies by the sum of market capitalization of all listed companies on NSE. Traded volume is the average of daily traded volumes of the last 3 months. It is calculated by dividing the total traded volume of large and midcap companies by the total traded volume of all companies listed on National stock exchange.

In conclusionLarge & midcap funds offer the best of both worlds !!!

JM Financial Mutual Fund has responded proactively to the changing conditions

Capital Goods

Slowdown in government expenditure has led to the sector's poor performance in the second half of the year. While the long term story still remains positive, we have currently reduced our exposure here.

Commodities

At the beginning of the year, when commodity prices came down, we increased our exposure to this sector, which benefitted from the subsequent rise in commodity prices.

Consumer Discretionary

Companies in Nifty 500 which are a part of this sector have experienced significant QoQ (-7.7% in June '24 to 2.5% in Sept '24) and YoY (3.8% in June '24 to 14.7% in Sept '24) growth in terms of Net Sales

Healthcare

Higher earnings visibility in this sector, improving fundamentals of companies and opportunities in turnaround stories led to an increase in the allocation in this sector. Increasing exposure to this sector has provided a cushion in the turbulent second half of the year.

Source – ACE MF, JMF MF Research, CMIE Prowess, LSEG Workspace, NSE EPR. Data as on May 31, 2025 as per latest available data. The sector exposure is the AUM Weighted exposure to a particular sector across JM Financial Mutual Fund Equity Schemes (JM ELSS Tax Saver Fund, JM Flexicap Fund, JM Midcap Fund, JM Focused Fund, JM Large Cap Fund, JM Value Fund, JM Small Cap Fund) for each month. AUM weighted exposure has been considered to showcase the experience of a larger number of investors, since funds with larger AUMs will most likely have larger number of investors. Commodities includes Oils, Gas, & Consumable Fuels and Metals & Mining. Consumer Discretionary includes Consumer Durables, Consumer Services, and Automobiles & Auto Components. Note: For complete portfolio, please refer website www.jmfinancialmf.com. Current Portfolio Allocation is based on the prevailing market conditions and is subject to changes depending on the fund manager's view of the equity markets. Sector(s)/Stock(s) / Issuer(s) mentioned above are for the purpose of disclosure of the portfolio of the Scheme(s) and should not be construed as recommendation. The Fund manager(s) may or may not choose to hold the stock mentioned, from time to time.
